Position
Entos Inc. provides tools for molecular and materials discovery through the use of physics-based machine learning. We have recently launched a new partnership to expand the reach and impact of our current technology. That partnership, with Schmidt Futures, a philanthropic initiative co-founded by Eric and Wendy Schmidt, will yield an open-source platform for chemical discovery. The new platform, called Entos Envision, will use machine-learning and quantum mechanics to enable researchers to find desirable molecules as easily as Google Maps makes route planning for motorists.

We seek an academic and non-profit focused community manager for Entos Envision. Successful applicants will have the opportunity to build and lead an educational and research community around a single goal: Everyone who is thinking or talking about molecules should have Entos Envision in their hands.

Responsibilities
• Foster an atmosphere of inclusivity and mutual excitement for the Envision project
• Handle primary communication to and from user groups (universities, research groups, other academic parties)
• Help build content and/or curate community content for using Envision in teaching and research (lesson plans, usage videos, workshops)
• Work with the Envision project manager to recommend and scope new Envision features for the growing community

Preferred Qualifications
• Demonstrable ability to develop and lead large communities
• An understanding of chemistry, chemical education, or research at the college or high school level
• Developed skills in communication, public speaking, and relationship building

Also
• Competitive compensation, inc. equity, benefits (medical, dental, vision), and 401K matching
• Location in Pasadena, CA is preferred

Company Background
Entos was founded in 2019 by faculty from Caltech and the University of Bristol and is situated at the interface of quantum chemistry, machine learning, and drug discovery. We seek to bring quantum simulation to real-world problems, with the aim of disrupting entire industries. Our team is tight-knit and rapidly growing. We are committed to building an inclusive work environment at Entos, where a diverse group of talented people work together to create awesome technologies. If you have the curiosity, passion, and collaborative spirit, join us and let's change the world together!
